

Effects of angiotensin II and leptin on blood pressure

To the Editor

I have read with great interest the article on effects of angiotensin II and leptin on blood pressure by Al-Hazimi et al¹ and appreciated the authors' effort to publish such work.

I felt that there was something wrong in Table 3, as the authors indicated serum angiotensin II as dependent variable in the result section, but showed arterial blood pressure in the table.

I respectfully submit this comment for kind consideration of the editor and authors as well as the benefit of readers.
