

## JOINT STATEMENT ON DATA PROTECTION AND PRIVACY IN THE COVID-19 RESPONSE

**19 November 2020** - The United Nations, IOM, ITU, OCHA, OHCHR, UNDP, UNEP, UNESCO, UNHCR, UNICEF, UNOPS, UPU, UN Volunteers, UN Women, WFP and WHO support the adoption of the following joint statement, in line with the UN Personal Data Protection and Privacy Principles adopted by the UN System Organizations to support its use of data and technology in the COVID-19 response in a way that respects the right to privacy and other human rights and promotes economic and social development.

The COVID-19 pandemic has become a global emergency, with devastating consequences in terms of loss of life and economic decline, and significantly hampering progress toward achieving the United Nations Sustainable Development Goals. Poor and vulnerable communities are particularly imperiled by this deadly disease and its economic ramifications.

Mounting evidence demonstrates that the collection, use, sharing and further processing of data can help limit the spread of the virus and aid in accelerating the recovery, especially through digital contact tracing. Mobility data derived from people's usage of mobile phones, emails, banking, social media, postal services, for instance, can assist in monitoring the spread of the virus and support the implementation of the UN System Organizations' mandated activities.[1]

Such data collection and processing, including for digital contact tracing and general health surveillance, may include the collection of vast amounts of personal and non-personal sensitive data. This could have significant effects beyond the initial crisis response phase, including, if such measures are applied for purposes not directly or specifically related to the COVID-19 response, potentially leading to the infringement of fundamental human rights and freedoms. This concern is especially pressing if some emergency measures introduced to address the pandemic, such as digital contact tracing, are turned into standard practice.

The UN Secretary-General highlighted in his policy brief on human rights and COVID-19 that "Human rights are key in shaping the pandemic response, both for the public health emergency and the broader impact on people's lives and livelihoods. Human rights put people centre-stage. Responses that are shaped by and respect human rights result in better outcomes in beating the pandemic, ensuring healthcare for everyone and preserving human dignity."

Any data collection, use and processing by UN System Organizations in the context of the COVID-19 pandemic should be rooted in human rights and implemented with due regard to applicable international law, data protection and privacy principles, including the UN Personal Data Protection and Privacy Principles. Any measures taken to address the COVID-19 pandemic should also be consistent with the mandates of the respective UN System

Organizations and take into account the balancing of relevant rights, including the right to health and life and the right to economic and social development.

Taking into account the UN Personal Data Protection and Privacy Principles, the UN Secretary-General's policy brief on human rights and COVID-19, and relevant health and humanitarian standards, data collection, use and processing by UN System Organizations in their operations should, at a minimum:

Be lawful, limited in scope and time, and necessary and proportionate to specified and legitimate purposes in response to the COVID-19 pandemic;

Ensure appropriate confidentiality, security, time-bound retention and proper destruction or deletion of data in accordance with the aforementioned purposes;

Ensure that any data exchange adheres to applicable international law, data protection and privacy principles, and is evaluated based on proper due diligence and risks assessments;

Be subject to any applicable mechanisms and procedures to ensure that measures taken with regard to data use are justified by and in accordance with the aforementioned principles and purposes, and cease as soon as the need for such measures is no longer present; and

Be transparent in order to build trust in the deployment of current and future efforts alike.

A coordinated and inclusive global UN-wide response rooted in solidarity is necessary to contain the pandemic and minimize its negative impact across the world. Although the statement is aimed to address the challenges of the current COVID-19 pandemic, it may serve as a precedent for using data to respond to any future crises of a similar scale quickly and while respecting data protection and privacy.

## WORLD LEADERS JOIN FORCES TO FIGHT THE ACCELERATING CRISIS OF ANTIMICROBIAL RESISTANCE

**20 November 2020** - The heads of the Food and Agriculture Organization of the United Nations (FAO), the World Organisation for Animal Health (OIE), and the World Health Organization (WHO) today launched the new One Health Global Leaders Group on Antimicrobial Resistance.

Group members include heads of government, government ministers, leaders from private sector and civil society. The group is co-chaired by their Excellencies Mia Mottley, Prime Minister of Barbados, and Sheikh Hasina Wazed, Prime Minister of Bangladesh.

The full list of the members of the One Health Global Leaders Group is available [here](#).

The group will harness the leadership and influence of these world-renowned figures to catalyze global attention and action to preserve antimicrobial medicines and avert the disastrous consequences of antimicrobial resistance.

The Tripartite organizations launched the group during World Antimicrobial Awareness Week 2020 (18-24 November), as part of their shared call for united action to preserve and protect antimicrobial medicines. The group was created in response to a recommendation from the Interagency Coordination Group on Antimicrobial Resistance and supported by the Secretary-General of the United Nations.
