The year 2017 was both a challenging and rewarding year for Saudi Medical Journal (SMJ). Having marked its 38th anniversary, SMJ’s Impact Factor has risen to a high record of 0.709 with a total of 2,523 citations as reported by the InCites Journal Citation Reports Thomson Reuters (Figure 1). This achievement has validated the continuous efforts of the whole editorial team. Along with the rest of the editors, we would like to recognize and express our appreciation to our dear authors, reviewers, readers, editorial board members and staff for their input, hard work and support.

The journal started the implementation of CARE Case Report Guideline as a mandatory requirement for case report submissions. Prior to submission, authors should read the CARE Checklist and write the article following the guideline’s essential requirements. This hopes to raise the clinical value of case reports published.

We are also conducting a regular critical auditing to the performance of the Journal. We are very meticulous with regards to the accuracy of the editing; medical writing is different from other professional writing, an excellent scientific experiments with novel ideas may still be rejected due to poor writing. Most authors in this region have difficulty in incorporating the objective, methods and knowledge in a proper English language.

The editors observed that poor language quality is one of the factors that delays the peer review process. Occasionally, reviewers were unable to assess the paper due to poor writing. Language should not be a barrier in scientific publication especially for non-native English speakers. Subsequently, articles with language deficiencies also take significant time in the editing stage and delay the publication process. To overcome this, we strongly suggest that prior to submission, authors should have their articles edited for correct use of grammar, syntax, flow and clarity and submit only once the language has been improved. As a pre-submission requirement, strict compliance shall be observed.

The discoverability and accessibility of scientific content to various relevant platforms is very important in today’s digital age. We take this time to announce the indexing of Saudi Medical Journal in Cengage. Cengage Company is a global leader with thousands of partner libraries around the world and has a large digital archive of research databases, reference books, eBooks and more. With the recent inclusion in this database, we anticipate enhanced visibility and accessibility of our articles.

The journal faced a few challenges this year. The frequent website issues also add more to the

Figure 2 - Type of manuscripts received for the year 2017.

We are particularly happy to welcome back our biostatistician, Dr. Adel Mishriky. His experience and expertise will be beneficial to the journal. We have surpassed many changes and challenges in 2017, yet we remain focused on our goals and priorities. As the new year commences, we will continue to deliver the brand of excellence we have established for many years. We will remain keen to sustain our position in the region as a respected journal for scholarly publishing. Again, we would like to thank everyone who supported us through the years.
